

Monarch Tagging Native Texas Park

Saturday, October 20, 2019

A male Monarch, note the round pouches on each hind wing.

Holding the butterfly securely at the base of the wings, identify the discal cell

Place the tag in the middle of the discal cell, pressing firmly for a few seconds

Monarchs, once tagged were placed in a mesh holding bag to confirm datasheet information is recorded correctly on the tagging sheet.

Recording sheet and ta

Once the data has been checked all monarchs are released to continue their journey to Mexico.

The Monarch Watch website MAY have information on the tagged butterflies.

IF the monarch is spotted or recovered as it flies North in the spring.
